

Self - Drilling Screw

Product Description/ Specification

BS Stainless supply a wide range of self drilling screws, the details on various types of screws and washers are given below.

The screws are manufactured from a range of materials including, Stainless steel grades 316, 304 and Zinc plated steel. Screws for highly specialised applications are manufactured from special grade materials including duplex stainless steel.

All products are sourced from suppliers who meet our stringent quality standards and are compliant with relevant BS EN ISO / DIN standards.

Silver Coating:

Screws can be coated with a silver GL coating if requested. The coating provides optimum sealing and reduces friction to allow quicker application. In addition to this, the coating also enhances corrosion resistance of the screws.

Screw Head:

The self drilling screws are available in a wide range of screw heads:

Hex Washer Head

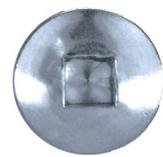

Hex Washer Head

Pan Head

Pan Head with Square Socket and Slot

Pan Head with Square Socket

Washers:

All self drilling screws can be supplied with washers if requested. We can supply 2 types of washers:

- Waterproof and oil resistant Polyamide washers which have a service temperature range of - 10 °C to + 85 °C.
- Bonded Stainless steel 316/EPDM washers to form a water proof seal and further improve the service temperature range to - 30 °C to + 130 °C.

HNBR/EPDM Washer

SS Bonded Washer
