

## Stainless Steel V-Clips

### Product Description/ Specification

V - clips are used between two vertical pieces of cladding. These are typically formed by bending a stainless steel strips into long sections to form a 'V' shape which interfaces between two neighbouring pieces of cladding to hold them in place, one on top of the other. The clips are equally spaced around the circumference of the pipe or tank. The number of clips increases with the diameter, but the number of V-clips to be used will be specified by the contractor.

The V-clips are manufactured from stainless steel strips to client required width and thickness.

#### Quality:

We are committed to offering quality product with service which is second to none. All V-clips are manufactured from CE approved stainless steel strip for CPR 305/2011 and we operate on ISO 9001 management system. The material is produced to meet relevant ASTM /BS EN standards.

Further information on mechanical and chemical properties of stainless steel used can be supplied on request.

#### Safety:

There are no known health risks in handling stainless steel, although it is recommended that gloves should be worn in case of sharp edges. Good lifting practice techniques should always be followed when handling these products.
